

Plantim Icons **v4.1** — proposal catalog

27 new semantic icons (outline / solid / duotone / multicolor × optical sizes 16–72) and 14 flags (color / mono), proposed additively on top of the shipped v4 set (4.0.0). Nothing here changes an existing id.

Read with the process report (plantim-icons-v4.1-proposal-report.pdf) and decide in the interactive catalog (plantim-icons-v4.1-proposal-catalog.html).

Loading states & placeholders 9

Skeleton and fallback glyphs for the moments before content exists: profile photo, plant photo, list rows, cards, charts, plus inline loading, pending and offline states. Today these are raw assets (profile-placeholder.svg), scaled-up tab icons (plant.sprout at 56 px as the plant-hero fallback) or nothing at all.

Container + ghost content. Multicolor stays inside the ink ramp (ink.300 container, ink.500 content) so a placeholder recedes; duotone mutes the container. Solids are real tiles, so a placeholder can occupy exactly the footprint of the asset it stands in for.

placeholder.avatar

P1 · Avatar placeholder

Ring + bust with the shoulders meeting the ring — the classic 'no photo' crop. Distinct from account.user (Profile tab) at every size; the solid keeps the space around the bust as its counter.

web: assets/profile-placeholder.svg (raw asset, outside the registry) · ios: ProfileView falls back to account.user · member lists, comments, public profile

placeholder.card

P1 · Card skeleton

Media block + two lines: card skeleton for plant / garden grids and the social feed.

Garden grid, Plants grid, SocialFeed cards

placeholder.chart

P2 · Chart skeleton

Axes + ghost bars for chart loading/empty. utility.bar.chart3 stays the 'chart' action glyph.

web: GrowthChart.vue empty state (utility.bar.chart3 h-7 today) · stats tiles

placeholder.list

P1 · List row skeleton

Avatar disc + two lines: a list-row skeleton (notifications, members, followers).

NotificationFeed, InviteMemberSheet, garden members

placeholder.plant

P1 · Plant photo placeholder

Photo tile + leaf. Replaces the scaled-up plant.sprout used as the plant-hero fallback; solid = filled tile with the leaf as counter.

web: PlantDetailsHero.vue:357 (plant.sprout h-14) · plant cards without a photo · AddPlant preview

placeholder.text

P1 · Text skeleton

Two full lines + one short — the canonical text skeleton. Bold solid gives fat bars for shimmer overlays.

feed / notification / journal rows while loading · Today card summaries

status.loading.dots

P1 · Loading (dots)

Bouncing-dots snapshot (middle dot raised) so it never collides with utility.more.horizontal; multicolor/duotone carry the trail. Reuses the existing a11y.icons.status.loading label.

Chat: 'AI is typing' · inline saves, optimistic updates · static fallback where Lottie is unavailable

status · Loading · Wird geladen · Yükleniyor

status.offline

P1 · Offline

Cloud + slash. The mobile client has no connectivity glyph; the status color lands on the slash.

offline banner (iOS/PWA) · sync indicator in Settings

status · Offline · Offline · Çevrimdışı

status.pending

P1 · Pending

Hourglass for waiting states that are not spinners: pending invites, queued sync, unverified email.

InviteMemberSheet, garden co-owner invites · VerifyEmail · offline queue

status · Pending · Ausstehend · Beklemede

Specific cases the app works around 18

Ids with no semantic equivalent in v2/v3/v4 that the clients currently fake with a neighbouring glyph: download (upload exists), sort, drag handle, QR, external link, language picker, add-photo, add-event, plant identification, humidity/light requirements, pet safety, misting/rotating care types, and room/indoor/outdoor placement (navigation.home doubles as "room" on both platforms).

Same v4 DSL, gates and grades as the shipped set. Siblings reuse v4 geometry verbatim where a pair must match (calendar.add ← calendar.date frame; utility.camera.plus ← utility.camera body; utility.download ← utility.upload tray).

calendar.add

P1 · Add event

calendar.date's hand-drawn frame + rings with a plus in the body; the plus survives the solid as a counter.

web: AddCareModal.vue, CalendarSidebar.vue (action.add today) · ios: AddCareModalView.swift

care.misting

P2 · Misting

Spray bottle + mist dots. Completes v3's care.watering/fertilizing/pruning/repotting with the one care type they lack.

care calendar categories · care rhythm strip

care.rotating

P2 · Rotating

Pot + clockwise arrow: turn the plant toward the light (even growth).

care calendar categories · care suggestions

location.indoor

P2 · Indoor

Window (frame + mullions) on a sill — distinct from utility.grid2x2.

placement attribute on plants / gardens

location.outdoor

P2 · Outdoor

Single round-crown tree on the ground; utility.trees is two pines.

placement attribute on plants / gardens · balcony / garden gardens

location.room

P1 · Room

Door on a floor line; the knob survives the solid as a counter. Frees navigation.home, which currently means both 'Today' and 'room' (audit §3a-5).

web/ios: RoomSelect, room chips · RoomScene / RoomColumn headers

plant.humidity

P1 · Humidity

Two drops — never confused with the single plant.watering drop (47 refs).

plant detail environment row · weather widgets / LocationPostcard

plant.identify

P1 · Identify plant

Viewfinder brackets + leaf: AI plant identification. Today the flow borrows utility.sparkles + utility.camera.

AddPlant identify step · Chat plant-picker overlay

plant.light

P1 · Light

Leaf lit by three rays from the corner: light requirement. weather.sun (17 refs) currently doubles as theme toggle and weather.

plant detail environment row · species select · room light hint

plant.pet.safe

P2 · Pet safe

Paw in leaf green. Pet safety is the most-asked species attribute after light and water.

species attributes · plant detail badges

semantic · Pet safe · Haustierversicherung · Evcil hayvanlar için güvenli

plant.pet.unsafe

P2 · Toxic to pets

Same paw with a slash; status.error on the slash in multicolor. Semantic pair with plant.pet.safe.

species attributes · plant detail warning badge

semantic · Toxic to pets · Giftig für Haustiere · Evcil hayvanlar için zehirli

utility.camera.plus

P1 · Add photo

The v4 camera body with a plus in the lens: 'add photo' as a distinct CTA. utility.camera (24 refs) currently means both 'photo' and 'add photo'.

profile photo · plant photo · journal entry

utility.download

P1 · Download

Mirror of utility.upload (same tray, reversed arrow). The registry has upload/upload.cloud but no download.

privacy: export my data · save plant photo · download care report / calendar

utility.drag.handle

P2 · Drag handle

2×3 grip for reordering; utility.move (4-way arrows) means relocate, not reorder.

reorder rooms, plants in a garden, care steps

utility.external.link

P1 · External link

Box + arrow leaving top-right — the universal 'opens elsewhere' affordance the policy pages lack.

PrivacyPolicy, AccessibilityStatement links · species source links

utility.language

P1 · Language

Speech bubble + 'A': the language/region picker trigger. Pairs with the flag.* asset class; crossbar dropped at micro.

Settings: language & region · onboarding locale step

utility.qr.code

P2 · QR code

Three finder patterns + modules; utility.scan.line stays the scanning action. True-fill solid with the finder rings as counters.

share garden / public profile via QR · scan plant label

utility.sort

P1 · Sort

Paired up/down arrows for list ordering. utility chevrons.up.down is the select affordance, not sort.

Plants list, Calendar, Feed ordering toolbar

Country flags 14

A locale/region picker needs flags; the web client already ships assets/flags/*.svg outside the registry. Proposed as a new asset class `flag.\*` — not semantic icons — with a `color` variant (fixed vexillological colors, clipped 20×14 rounded rect, 12 % hairline border) and a `mono` variant (frame + partition lines in currentColor) for tinted contexts.

Starter set = the three shipped locales (de, en → gb/us, tr), the EU, nine likely-next European regions, and a neutral `flag.unknown`. Icon-size simplification is deliberate (no coats of arms, 7 stripes / 8 stars on US, single-layer saltire on GB): a 16 px flag reads by silhouette and color. Colors are never theme tokens; dark mode is handled by the border, not by re-coloring.

flag.at

P1 · Austria

likely next region for a European plant-care audience

Settings: language & region · LocationPostcard

semantic · Austria · Österreich · Avusturya

flag.ch

P1 · Switzerland

likely next region for a European plant-care audience

Settings: language & region · LocationPostcard
